Amendment Header

Amendment Submitter

April 2025 cycle
03/14/2025 • Nicholas Zadrozna • Internal

This amendment was re-assigned through Full Board review at a request from Dr. Dickey. The amendment will be scheduled to be discussed in the CPHS April 25, 2025, full board meeting.
03/25/2025 • Sussan Atifeh • Internal

2023-123 Amendment.msg 03/25/2025 5:01 PM ET

This amendment is adding a new population for survey—the caregivers of colorectal cancer patients and should be discussed in the April full board meeting.
03/25/2025 • Sussan Atifeh • Internal

Instructions for amending your approved application:

This is a copy of the project application in order to amend the project. You must answer all the amendment questions. After you've answered those questions, you will have to update all answers on the form that related to your proposed changes. You may leave other questions with their original answer. If you do not update the appropriate responses on the form related to your proposed amendment, you will be required to make additional changes.

Note that the contacts listed on this page are output only questions that cannot be changed. If you need to request personnel changes, you will be prompted later on within this form to enter the new contact information.

PI:

Ann Hamilton, PhD

Administrative Contacts:

Name	Role

Protocol Number:

2023-123

Protocol Title:

Risk Stratified Survivorship Care Pathways for Early-Onset Colorectal Cancer (the Survive-CRC Study)

Indicate what types of changes you are requesting to this project. Select all that apply

Recruitment strategy and/or materials

Clearly summarize and justify your proposed changes to the protocol in layman's terms for all selections made above

March 2025 Amendment: We are adding a survey for care supporters. A subset of participants who have already completed the survey and, on their survey, indicated they had a care support person (most often either a family member or a friend), will be asked if they are willing to provide the care support survey to that person. We are including the invitation letters and Info Sheet and reminder letters for this part of the study as well as the survey itself. We are submitting only English language materials at this time but a subsequent amendment will have the Spanish language translations.

_____

2/6/2025 We are adding Dr. Lauren Wallner as a Co-PI. She is the overall study PI from the U. of Michigan and will be involved with the analysis of research files including the vital statistics data from VSAC. In addition the RO has changed from Dr. Hu to Dr. Bluthenthal.

Regarding the question, Dr. Wallner has signed the CCR's Appendix 3 attesting to the security of the data. She will be receiving a de-identified file for analysis. U. of Michigan IRB has approved the study and is responsible for assuring the security of the data at U. of Michigan. She has also signed the VSAC IPSR form indicating the security of the data at her location.

9/10/24: We are submitting our recruitment letters (initial and reminder) and Info sheets, English and Spanish, which have had ONE sentence added to each, reading "We may contact you again for future study activities." We plan to contact a subset of survey responders with an additional survey for them to provide to their designated caregiver. That recontact component will be a future amendment.

_____

8/14/24: We are submitting our Spanish language materials, translated by an official translation service. Materials include the survey (questionnaire), the Info Sheet, Intro letter and reminder letter, reminder email wording, and 2 phone scripts, one for regular follow up and one for missing information.

7/4/24: We obtained the approval letter for the amendment for Aim 2 on 6/14/24. After the amendment was approved there were some formatting and other changes made to the questionnaire, primarily to add skip instructions. An edited and clean copy of the revised questionnaire have been uploaded.

I obtained the CPHS Chair's signature on the Reliance agreement form (attached), and submitted it to the USC IRB. I have received (and attached) the USC IRB's agreement to cede authority to the CPHS.

May 3, 2024. We previously obtained approval for Aim 1 of the study that involved review of path reports and did not involve patient contact. Now we are requesting approval for Aim 2 which includes a patient survey and a different sample of patients. We have submitted the survey, letters, protocol, and other documents associated with Aim2.

We would also like to change the title of the study to: Survivorship Care and Recurrence Risk Evaluation for Early-Onset Colorectal Cancer Patients-SURVIVE CRC Study

We have added Dustin Tan as a staff member who will be involved in administration of the survey.

Dr. Dickey conducted a preliminary review and had some concerns regarding how missing data items would be handled. I have made edits to the protocol to address his concerns and uploaded a revised survey document, edited informed consent and edited the missing data section in the protocol statement. Specifically the concerns were that we had different statements regarding skipping questions in the information sheet and in the survey instructions. We have now edited the survey to be consistent with the information sheet stating the 'You may skip any question you do not wish to answer'. We have also removed the instruction from the information sheet that indicated that the participant should write 'skip' next to any question they did not wish to answer. The online version will not require that an answer be entered in order to go to the next question. We revised the missing data section to indicate that we would only call back for missing data if entire pages were blank, using occurring when two pages were stuck together when the page was turned. However even if the page was blank we would not be calling back regarding sexual functioning, income, gender identity, or sexual orientation.

I have also added more detail on the method of sampling the cases. We will send U. of Mi. a de-identified file of potentially eligible cases with only study id, age, sex, stage and race-ethnicity. They will sample cases based on these characteristics and send us back the study ids to be included the sample.

Indicate the Level of Risk involved with the changes proposed.

If level of risk has changed, please update the "Risks" section in the protocol form.

Level of Risk has not changed

Personnel Information for Amendment

Please complete the questions below.

If while trying to complete those questions, personnel are not found by their email address, you can add them in the system by completing the 'new contact form'. Click on the form and complete it. Within a few minutes of completing the form you will receive an email notifying you of the availability of the new contact. You should then be able to add them in the subsequent questions.

Enter the project title (please capitalize each word in your title).

Survivorship Care And Recurrence Risk Evaluation For Early-Onset Colorectal Cancer Patients-SURVIVE CRC Study

STUDY PROCEDURES

Indicate the study procedures involved in this research. Check all that apply.

Data Registry
Recruitment-Participant
Surveillance Data
Surveys

TYPE OF RESEARCH REQUEST

Indicate which of the following applies to this research. Check all that apply.

*Death Data Only refers to health-related studies requesting existing mortality data from **within** the California Human Health Services Agency (CHHSA)*

*SB-13 (Information Practices Act) refers to health-related studies requesting existing data from **outside** the CHHSA (e.g. California Department of Corrections and Rehabilitation [CDCR], California Department of Education [CDE], etc.) **OR** studies requesting data **within** the CHHSA that are not state funded or involving state staff.*

Common Rule/Human Subjects refers to health-related studies that involve direct or indirect interaction with human subjects (e.g. recruitment, interviews, etc.)

*Common Rule Only refers to health-related studies requesting existing data from **within** the CHHSA (e.g. Office of Statewide Health Planning and Development [OSHPD], California Department of Public Health [CDPH], etc)*

Common rule/Human subjects

PROJECT TYPE DETAILS

Indicate which, if any, apply to this research. Check all that apply.

If the research does not involve any of following, choose "None of the above."

Minimal Risk
Non-English translation required
HIPAA waiver
Consent form
Reliance Agreement relying on CPHS

Please click the link below to fill out the Reliance Agreement. After you've finished the form, you will need to save it locally and then attach in the space below.

VULNERABLE POPULATIONS

Indicate which vulnerable populations, if any, will be involved with this research. Check all that apply.

If vulnerable populations are not part of the research, choose "Not applicable."
Note regarding minors: in the United States, a minor is under 18 years of age. If research is conducted outside the United States, a minor is under the age of majority in the countries where research is to be conducted.

Not applicable

FUNDING

Is this research funded?

Yes

Indicate the funding source for this project.
Federally funded
University funded

Enter name of federally-funded source.
NCI

EXPEDITED REVIEW CONSIDERATION

Please check the criteria below that you think your project meets to qualify for an expedited review. If none of these expedited criteria are appropriate for your project, choose 'not applicable'; your protocol will be reviewed by the full committee. Note that CPHS will make the final determination of whether the project meets the criteria for expedited review.

Protected Health Information/Personally Identifiable Data (PHI/PID) is defined as information in any format that identifies the individual, including demographic information collected from an individual that can reasonably be used to identify the individual. Additionally, PHI is information created or received by a healthcare provider, health plan, employer, or health care clearinghouse; and relates to the past, present, or future physical or mental health or condition of an individual, including any of the 18 HIPAA identifiers.

Note: Please be aware that individual participants may be identifiable by combining other items in the data even when none of the 18 HIPAA identifiers are present. Thus, a study may still contain PID even after removing or never acquiring the identifiers, and the investigator may still need to provide complete answers for the data security questions in the protocol.

***The Departments within the California Health and Human Services Agency (CHHSA) are: Aging, Alcohol and Drug Programs, Child Support Services, Community Services and Development, Developmental Services, Emergency Medical Services Authority, Health Care Services, Mental Health, Public Health, Rehabilitation, Social Services and Statewide Health Planning and Development.*

New project requesting only previously existing PHI/PIDs and not involving state research staff, funding or state mental hospital patients from departments within the CHHSA (Common Rule review)

ANTICIPATED PROJECT START DATE

Projects cannot begin before they have been reviewed. The earliest possible start date is always the date of the next public meeting at which the project will be heard.

For a list of public meeting dates, see the CPHS website

09/01/2023

ANTICIPATED PROJECT END DATE

08/31/2028

Project Details

PURPOSE

Include a brief statement, less than 500 words, describing the research project. Be sure to address the background for the project, including relevant literature, the major research questions to be addressed, and the expected end product (e.g., article, report or other publications). Include the location(s) where the project will take place. The summary should be understandable to the general public.

Over the past two decades, the incidence of colorectal cancer among adults < 50 years of age (i.e., early-onset CRC) has been increasing, however, survivorship care has evolved slowly and remains poorly informed and of suboptimal quality. Thus, there is a critical need to design a model of survivorship care that aligns: 1) the intensity of surveillance with actual risk of recurrence; and 2) the provision of care services with need. Stratified survivorship care pathways provide an opportunity to deliver patient-centered, high-quality care that is appropriately tailored to individual needs. However, these pathways currently do not exist for patients with early-onset CRC, which is in part due to the lack of population-based estimates of recurrence that can guide surveillance approaches and the dearth of knowledge regarding these patients' unique survivorship care burdens and needs. In this proposal, we will identify patterns of recurrence among patients with stage I-III early-onset CRC, generate population-level estimates of risk of recurrence, and examine clinical and sociodemographic factors associated with recurrence risk (Aim 1). May 2024 amendment: We will then survey a cohort of patients diagnosed with early-onset CRC to assess patients' receipt of surveillance and self-reported survivorship care needs across multiple domains (Aim 2). This grant is a subcontract with Dr. Wallner from the U. of Michigan who is the overall PI and will be conducted at USC for the Los Angeles cases. In addition to Los Angeles cases, the study will include cases from Georgia and Kentucky. The Los Angeles Aim 1 work will take place at the USC Keck School of Medicine. A dei-identified research file will be provided to Dr. Wallner at U. Mich. for analysis.

MAJOR RESEARCH QUESTION

What is the major research question to be addressed in this project?

Are patients with early onset colorectal cancer receiving appropriate survivorship care based on their clinical factors and how many experience recurrence?

STUDY PROCEDURES

Describe in detail all procedures for this research. Do not attach grant applications or similar documents. Information in this application must be sufficient to fully explain the procedures without such documents

March 2025 Amendment: We are now uploading our Care Supporter Survey segment of the study. We will mail an invitation to the patient participant (who had previously completed the main survey) explaining the care supporter portion of the study and asking them to pass on the survey to their care supporter. We believe most care supporters will be either in the same household as the study participant or live nearby. Alternatively, some study participants may want to send us their care supporter's contact information, and we will mail a survey directly to the care supporter. Eligible care support persons will be given or sent a packet of materials, consisting of: 1) a letter plus an Info Sheet indicating that they have been selected to participate in a study and describing the purpose of the study, and includes contact information for them to use if they have any questions; 2) a paper copy of the survey and instructions for completion; and 3) a postage-paid envelope for returning the paper survey.

We will then use a modified version of the Dillman method to enhance survey response rates and will follow up with reminder letters to encourage survey completion and telephone calls to answer questions. We will limit the number of follow up calls to n=5. We will provide a telephone interview option as needed to ensure optimal retention rates even in populations with low literacy. We will also have an online survey option. Care Supporter Survey materials will be provided in both English and Spanish for patients who had previously completed the original SURVIVE Study survey in Spanish. A $20 gift card will be provided after a survey is returned as a thank you for their participation.

As part of the Care Supporter survey, there is a question (QF11) asking if they would be interested in a follow up interview to share experiences. We will send out an invitation letter to the Study participant if their care supporter indicated interest in this interview. Respondents who agree to the interview are requested (per instructions on the invitation letter) to communicate with a staff member at the University of Michigan who will be the person conducting the interview.

At this time, we are including English language materials only. A subsequent amendment will be submitted with Spanish language translations.

_____

Adding for 9/10/24 Amendment: we plan to recontact a subset of survey completers and ask them to send their designated caregiver a survey. More details including the survey itself will be provided in a future amendment. We are therefore adding the sentence "We may contact you again for future study activities" to letters and Info Sheets so that participants are informed of this possible recontact.

_____

Previously:
There are two aims for the project. At this time we are requesting approval for Aim 1 only, which will involve review of path reports and other methods to identify recurrence in patients diagnosed with early stage CRC between 2015-2018 from the Los Angeles Cancer Registry and will not involve patient contact.

We are now (May 2024) submitting an amendment for the second Aim will involve a survey of cases diagnosed in 2019-2023 and we have uploaded the survey, letters, and other materials. In response to Dr. Dickey's comments we have uploaded a revised version of the survey that indicates that the participant can skip any question they do not wish to answer. This makes it consistent with the information sheet. The only change is the top sentence on the instruction page.

The creation of data for Aim 1, including medical record review, abstraction from path reports, linkage to CoC and mortality data will be stored at USC and will be linked by a study ID. A de-identified research file that will include the variables abstracted from each source and cancer registry variables will be sent to Dr. Wallner at U. Michigan for analysis. Previous similar such studies have not required a separate Data Security Letter from the site where analysis is done since they will be signing the CCR's Appendix 3 and their data security is included in their U. of Michigan IRB review. Also no personal identifiers are sent to U. of Mich. However, if this is a new requirement I will request it and add it as an amendment.

Procedures for Aim 1:
1) the LA-SEER Cancer Registry will use routine case ascertainment to identify all patients <50 years of age with incident Stages I-III CRC in diagnosis years 2015-2018 as reported to the LA County SEER registry (total n=1675).
2) USC staff will abstract key clinical cancer and demographic variables and employ a multi-pronged methodology to identify recurrences in the 5-year period following initial diagnosis, including data from the following sources:

1) SEER pathology and available pathology reports
We will abstract both electronic and hard copy (as needed) reports for all pathology reports identified over the 5-year post-diagnosis period and manually review them for evidence of recurrence. We estimate the need to manually review reports for 25% of selected cases (n=419) (See attached path review form).
2) Commission on Cancer (CoC) hospital recurrence data
We will utilize the CoC-Los Angeles SEER data linkage to identify any additional recurrences not captured via pathology reports
3) SEER mortality data
We will use linked data from state vital records and National Death Index Files to identify any patients who later died from CRC. These patients will be considered to have experienced recurrence or progression to metastatic disease.

We will identify rates of CRC recurrence within five years and characterize patterns of recurrence. De-identified data will be shared with U. of Michigan investigators for analysis.

Aim 2 (included in the May 2024 amendment)
The LA-SEER will identify by both routine and rapid case ascertainment a sample of 1000 adults aged <50 years who were diagnosed with incident Stages I-III CRC in diagnosis years 2019-2023. African American, Asian, and Latina

patients, and patients with stage III disease will be oversampled. Selected patients will be mailed surveys to assess patient-reported receipt of surveillance care and survivorship care needs.

Fieldwork procedures are as follows:
Survey Fieldwork
1) LA County Cancer Surveillance Program will select sample of 1000 cases according to study guidelines
2) A tracking database will be established to monitor the fieldwork and create reports on study progress.
3) Subjects will be able to complete the survey by paper, or online (or by telephone if requested). The online survey will be created in Qualtrics by the University of Michigan but hosted separately at USC, so only USC staff will have access to our own dashboard containing survey response and participant information. University of Michigan investigators and staff will not have access to any patient PII or PHI during the course of this study.
4) Prior to mailing of the survey packet, sites will remove any patients known to be deceased and will trace addresses to assure that current addresses are being used.
5) Sites will mail a survey packet to each patient in the sample in batches over a 10-month time period (approximately 100 packets mailed each month per site).

The survey packet contains:
a. An introductory letter (see Recruitment Letter attachment) that describes the study and includes the URL ad QR code and patient-specific log-in information (Access Code) for the online survey option.
b. A research information sheet that describes the steps taken to assure participant confidentiality and includes contact information for the study team and the IRB
c. A paper copy of the survey (see survey attachment) and a postage-paid envelope for returning it
d. A $20 gift card

We need to submit an amendment for Spanish language study materials, including a survey will be included in the packet for patients with Spanish surnames. A Spanish language version of the online survey will be made available. Until approved, we will not include Spanish Surnamed patients in batch mailings.

6) We will use the tracking database to track receipt of completed surveys, monitoring the online survey completion dashboard as well as incoming paper surveys.
a. If the patient has not completed a survey within 2 weeks after the initial mailing, USC study staff will call the patient to answer questions and encourage them to complete the online survey (or the paper survey if patient is hesitant or unwilling to do the online survey). Study staff will ask for the patient's email address in order to send them a direct, clickable link to the online survey, though patient provision of email address will not be required to take part in the study. Study staff will also offer a telephone interview option. At least 5 calls will be made to reach the patient, including nights and weekends as necessary.
b. If patient is unable to be contacted, Study staff will conduct additional tracing to try and find an updated mailing address and/or phone number.
c. 2 weeks later, if patient still has not completed the survey and has not opted out, Study staff will send a reminder email (if email provided) or a reminder letter encouraging online survey completion or completion by paper survey followed by 3 phone calls.
d. 2 weeks later, if still unsuccessful, a second copy of the survey packet (minus the incentive) will be sent followed by 3 phone calls.
e. 2 weeks later, if still unsuccessful, Study staff will make a final attempt to encourage survey completion via phone calls, emails, and reminder letters (depending on how participant was able to be contacted previously) containing the link and log-in information (Access Code) for the online survey .

Missing Data Protocol
In some instances, a respondent will send back a survey with some pages left blank. In cases where an entire page(s) of the survey is skipped, Study staff will attempt to call these respondents to obtain answers to the missing questions. In some cases, copies of the blank pages would be mailed to the participant to complete along with a postage paid return envelope.

Even if a page is left blank, no call backs would be made for questions on sexual functioning, income, gender identity, or sexual orientation.
For the online survey, there will be no restriction in going to the next question if a respondent leaves previous question blank.

Survey Data Handling
All data for this study will be stored on password-protected servers and/or in locked filing cabinets. Only designated study staff and investigators will have access to study materials.
Sites will collect and securely store patient contact information provided by patients during the course of this study and used to manage survey follow-up efforts (i.e., phone number, email address). This contact information will be retained by the USC site and never transmitted to University of Michigan investigators and staff.
USC staff will strip patient paper surveys of any PII that may have been written in by the respondent prior to transfer to the University of Michigan. Electronically-completed surveys will reside on the University of Michigan-hosted Qualtrics server and will not collect PII or PHI.
Sites will send paper surveys to the University of Michigan via Fedex for double data entry at regular intervals. Paper surveys will not contain any PII .

7) Only a limited dataset (with no PII) will be shared with the University of Michigan study team.

SEER Data Linkage
At the conclusion of the study, once all survey data has been collected and the sites have concluded follow-up efforts for the study, the sites will provide the University of Michigan study team with a SEER data file from their registry database of patients in the study sample. The file will contain cancer diagnosis and treatment information, urban/rural residence classification codes, and updated vital status information for all patients in the study sample – such as survival status and cause of death. This file will not contain patient identifiers (PII) and will only contain the Study ID of each patient, diagnosis and treatment information, codes for either rural or urban residence, and vital status information. The University of Michigan analytic team will merge the SEER data with the survey data using the Study ID number.

Please upload here any tables or charts related to your study procedures and any materials (such as surveys or interview

questions) that will be presented to participants.

DECEPTION

Will deception be used in this study?

No

CALIFORNIA HEALTH AND HUMAN SERVICES AGENCY (CHHSA) DEPARTMENTS LIST

Indicate any of the following CHHSA department(s)' involvement in providing research staff, funding and/or patients from State mental hospitals for this project.

Not applicable

STATE DEPARTMENT DATA/SPECIMENS

Choose the department(s) from which you are requesting data and/or specimens and provide the formal name of the database or specimen registry. After you have selected the department from the drop down and entered the formal name of the database or specimen registry, click 'add' and repeat to add additional data and/or specimens if applicable.

Agency	Provide the formal name of the data base or specimen registry.
California Department of Public Health	California Cancer Registry

Study Population

POPULATION DESCRIPTION

Provide a full description of how human subjects will be involved in the research. Address characteristics of subjects such as: age; sex; ethnicity; and number of participants. Include requested participant number.

Amendment March 2025: The Care Supporter Survey will be sent to the study participant to provide to their care supporter. This care supporter is identified by the study participant (the person who did the SURVIVE Study survey previously) and we do not have knowledge of their characteristics. We anticipate sending a Care Supporter Survey to n=300 study participants for them to pass on to their care support person.

_____

Aim 1 will include all patients <51 years of age with incident Stages I-III CRC in diagnosis years 2015-2018 as reported to the LA County SEER registry (total n=1675). (no selection is made related to age, sex or ethnicity since all patients meeting the selection criteria will be included).

Aim 2- described in May 2024 amendment, will include a sample of 1000 adults aged <510 years who were diagnosed with incident Stages I-III CRC in diagnosis years 2019-2023 and are not known to be deceased. African American, Asian, and Latina patients, and patients with stage III disease will be oversampled. These cases will not be included in any other study.

DATABASE DETAILS

List the database(s) to be used and the time period(s) being requested. This may include requests for future data that is not available at this time.

List the variables being requested, including a brief description of each variable.
Justify the need for each variable and for the quantity of data being requested.
You may also attach a list of variables on the next question.

Also address if participants will be involved in any other studies.

The registry variable list for Aim 1, including text fields, is included as an attachment. We will also request mortality data (Attachment A). Dr. Wallner will be receiving a de-identified research file for analyses including the mortality data.

For Aim 2, we will request the same registry variables as indicated for Aim 1, and also request patient contact variables in order to send the recruitment letter and survey packet to the sampled cases.

If you have a list of variables with the details requested in the above question, attach that here. If you provided all details on the database in the question above, skip this question.

Attachment A_Survive-CRC_Study.docx	List of Variables
Patient contact variables.docx	List of Variables
SURVIVE CRC SEER variable list.xlsx	List of Variables

RATIONALE

What is the rationale for studying the requested group(s) of participants?

March 2025 Amendment: Informal care supporters such as family members and friends can face substantial burdens in providing support, but their needs are rarely addressed in current survivorship guidelines. This part of the study will help bring more knowledge that can also be applied broadly to other cancers - to patients and their care supporters.

_____
The study is investigating recurrence, treatment and survivorship among those with early onset colorectal cases and all the available cases are needed to address the aims. In addition to Los Angeles cases, the overall study will also include cases from Georgia and Kentucky to reach the desired number.

Patient reported experience with the treatment they have received and problems experienced from their colorectal cancer will be obtained from the patient survey. A more recently diagnosed group of patients will be selected.

RECRUITMENT DETAILS

Describe how potential subjects will be identified for recruitment. Examples include: class rosters; group membership; individuals answering an advertisement; organization position titles (e.g., presidents, web designers, etc.). How will potential participants learn about the research and how will they be recruited (e.g., flyer, email, web posting, telephone, etc.)?

Important to remember: subjects cannot be contacted before IRB approval.

For March 2025 Amendment: for the care supporter survey we are uploading with this amendment, care support persons are identified by the survey completers. Question I11 of the survey to participants asked them to identify the person who has been most involved in helping them with their diagnosis of colorectal cancer. Participants were NOT asked to name the care supporter specifically but rather to confirm that they have one and what that relationship is, for example partner or sibling. Care supporter surveys will be mailed to the study participant for them to pass on to their care supporter. All follow-up will be to the study participant. No more than 5 calls will be made to the study participant to encourage/remind their care supporter to complete the survey.

_____
No patient contact is occurring for Aim 1.

Cases for Aim 1 are being selected from the cancer registry.

For Aim 2, 1000 patients (not known to be deceased) will be selected from the cancer registry meeting the sampling criteria:
if 21041<=SEERWHO<=21052 and
2019<=yeardx<=2023 and
18<=age<=50 and
'10'<=STAGE_SEER<='39' and
SEQNOCEN in ('00','01') and
'10'<=SURGPRIM<='90' and
histo_t3 notin /*excluding the carcinoids*/
('8013','8041','8051','8070','8071','8072','8083','8240','8241','8246','8249','8380','8720','8800','8815','8858','8890','8936','8980');

In order to select the sample according to year of diagnosis, stage at diagnosis, age at diagnosis and race/ethnicity we will first send a de-identified file of all eligible cases including only study IDs, year of diagnosis, stage at diagnosis, age at diagnosis and race/ethnicity to the U. of Mich (Dr. Wallner), who will select the sample and send us back the studyids to be included. This way they can coordinate the sample selection among all three sites participating to assure having the desired numbers in each category.

They will learn about the study by first receiving the recruitment letter and research information sheet included in the survey packet. A brochure from the CCR will also be included to inform them about the cancer registry and how we obtained their name. See Study protocol section for additional details on recruitment. A reminder letter will sent if needed, verbal script will be used for phone calls, and email text is provided if we have previously obtained their email or phone number and have permission to text them.

August 2024: An amendment is being submitted with the Spanish language versions of these attachments.

A revised information sheet has been uploaded in response to Dr. Dickey's comments that deleted instructions pertaining to writing 'skip' next to any question they did not want to answer.

Attach copies of all recruitment materials.

SCREENING

Will subjects be screened prior to entry into the research?

No

COMPENSATION

Will subjects be compensated for participating in the study?

Yes

Compensation type
Gift card

Explain the amount and schedule of compensation that will be paid for participation in the study. Include provisions for prorating payment. The amount should not be coercive.
Amendment March 2025: People will be sent a $20 gift card after they have completed the Care Supporter survey. The gift card will be sent to the study participant who identified their care supporter and the participant will be asked to provide the gift card to their care supporter.

_____
There will be compensation for cases selected for Aim 2, but no compensation in included for Aim 1.
Aim 2 cases will receive a $20 gift card up front included in the survey packet mailing. They may keep the gift card whether or not they participate.

STUDY DURATION

Estimate the probable duration of the entire study. This estimate should include the total time each subject is to be involved and the duration of each data collection about the subject.

E.G., This is a two-year study. Participants will be interviewed three times per year; each interview will last approximately two hours. Total approximate time commitment for participants is 12 hours.

March 2025 Amendment: Care Supporter Survey: the time estimated to complete the survey is about 30 to 45 minutes. This is a one-time only survey. We will send out survey batches for 7 consecutive months and have an additional 3 months to finish follow up.

_____
No patient contact is involved for Aim 1.

The involvement of subjects for Aim 2 is limited to the time it would take them to complete the survey, which is estimated to be 45 minutes.

Risks and Benefits

RISK DESCRIPTION

Provide a description of possible risks to participants: physical, psychological, social, economic, loss of data security, and/or loss of confidentiality. Describe and justify whether the research is minimal risk or greater than minimal risk.

Overall risks are minimal for Aim 1 because data will be collected from registry, hospital, path report, and mortality data and kept confidential. All data sources will be linked by a study id and no personal identifiers will be kept in analytic files. The greatest potential risk is loss of confidentiality related to personal health information.

Risks for Aim 2 include possible loss of confidentiality and possible psychological stress in completing questions about their cancer treatment and it's impact on their quality of life. However they are instructed to skip any question that they do not want to answer.

MEDICAL SERVICE RISKS

Describe how medical services will be provided if subjects suffer adverse mental or physical effects as result of research activity. If no services provided, state that clearly.

No medical services will be provided

INTERNATIONAL RESEARCH

Will this research occur outside of the United States or U.S. territories?

Check with client to see if they consider territories to be outside the U.S. or not, as this can vary between institutions.

No

LESS RISKY METHODS

Describe any less risky methods and why they are not being used.

This is a non-invasive, no patient contact study for Aim 1 and there are no other methods that are less risky than the ones being used. Aim 2 will only involve a patient survey that can be completed when convenient for the patient. They can skip any question they do not wish to answer. Thus this is a minimal risk study.

BENEFITS

Describe the benefits, if any, to the subjects or to society that will be realized as a result of this project. Discuss the benefits that may accrue directly to the subjects as well as to society. If there is no direct benefit anticipated for the subjects, state that clearly.

There are no direct benefits to the patient subjects in Aim 1 as they are not involved directly.

There are no direct benefits to the subjects in Aim 2 other than the knowledge that they have contributed to research that may help cases diagnosed in the future and could contribute to improving survival and quality of life of other cancer survivors.

JUSTIFICATION OF RISKS

Explain why study risks are reasonable in relation to the potential benefits to subjects and to society.

The study risks due to loss of confidentiality and psychological stress are minimal compared to the information to be gained from the study

Adminstrative Safeguards

PERSONALLY IDENTIFIABLE DATA (PID) INSTRUCTIONS

Protected Health Information/Personally Identifiable Data (PHI/PID) is defined as information in any format that identifies the individual, including demographic information collected from an individual that can reasonably be used to identify the individual. Additionally, PHI is information created or received by a healthcare provider, health plan, employer, or health care clearinghouse; and relates to the past, present, or future physical or mental health or condition of an individual, including any of the 18 HIPAA identifiers.

Note: Please be aware that individual participants may be identifiable by combining other items in the data even when none of the 18 HIPAA identifiers are present. Thus, a study may still contain PID even after removing or never acquiring the identifiers, and the investigator may still need to provide complete answers for the data security questions in the protocol.

If the researcher demonstrates that he or she is unable to comply with any of the requirements below, he or she may request an exception from these requirements. The researcher should indicate any measures that will be taken to address this requirement. The exception request should be made in the text box of the corresponding requirement. An exception will only be granted if the researcher can demonstrate that adequate alternative measures have been taken to minimize risks so as to justify the exception.

HIPAA IDENTIFIERS

Please identify which HIPAA Identifiers you plan to request as part of your submission.

Name
Address (all geographic subdivisions smaller than state, including street address, city county, and zip code)
All elements (except years) of dates related to an individual (including birthdate, admission date, discharge date, date of death, and exact age if over 89)
Telephone numbers
Email address
Social Security Number
Medical record number

TRAINING PROCEDURES

Describe the procedures for training all research staff who have access to PID on privacy and security. Indicate if staff are required to sign a confidentiality statement related to general use, security, and privacy.

Staff are required to have IRB and HIPAA certification to participate in the study. They also take confidentiality training administered by the Los Angeles Cancer Surveillance Program and sign confidentiality pledges.

STAFF VETTING PROCEDURES

Describe procedures, either background check or thorough reference check, for vetting staff who will have access to PID.

All employees hired by USC undergo a background check.

SUPPORT LETTER

Obtain and submit a department support/data release letter.

This is a statement from the state agency or department you are receiving data from. It must be on that agency's/department's letterhead and should include both

1) *that the release of the desired data is legal and*

2) *that the entity is willing to release the desired data to you, the researcher. If you are not receiving data, this letter should indicate that you are supported.*

***For VSAC requests, if you do not have a Departmental Letter of Support (LOS)/Data Release, you may upload a copy of the Data Request Form (application) from the department to secure a review for the upcoming cycle. The protocol will not be approved until the LOS is uploaded to the protocol.*

Please also review the CPHS Statement for Birth and Death Data.

CPHS_LOS_Hamilton, A.docx.pdf Department Letter of Support

PREVENTING RE-USE AND UNAUTHORIZED ACCESS

Explain how you will ensure that data will not be reused or provided to any unauthorized person or entity.

Unauthorized means that the person or entity does not have a need to access the data for purposes of the research project approved by CPHS.

All data will be kept on secure servers and not released to any unauthorized person or entity. Dr. Hamilton will assure that she will not release data for any other purpose by signing the CCR's Appendix 3. Dr. Wallner has also signed CCR's Appendix 3.

CONFIDENTIALITY OF PUBLISHED DATA

Indicate whether information will be published that could possibly be used to identify an individual subject.

No publications will included individual's names or allow for identification of an individual. All results will be presented in tabular fashion.

DATA REQUEST JUSTIFICATION

Provide adequate justifications for the quantity of the data, the years and the variables being requested. Have you requested no more than the minimum necessary data to perform the research?

We have assessed the number of cases required to meet the study's goals. The sample selection and power of the study were reviewed by NCI as part of the grant review process.

LIMITATIONS TO DATA ACCESS

Indicate if access to data is limited only to those with a need to know for purposes of implementing or evaluating the research.

Access is limited to only staff who need to select the cases according to the eligibility criteria and to implement the research.

UNIQUE IDENTIFIERS

If applicable, justify why unique identifiers, other than social security numbers, cannot be used.

SSN's will only be used to trace lost individuals. The sources for tracing (Lexus Nexus) use SSNs to provide updated addresses from their databases. Without using them we make obtain addresses to the wrong individual (e.g. someone with the same name).

PROTECTION AGAINST SMALL CELL SIZES AND ASSOCIATED PROBLEMS

Describe appropriate and sufficient methods to protect the identity of individual subjects when small cells or small numbers and/or data linkage to another data set are involved in the research project.

Cell sizes under 5 cases will be suppressed in any publication.

LINKAGES

Will the data set be linked with any other data sets?

Yes

Identify all data sets and each of the variables to be linked, with a brief description of each variable and justification for each linkage. If there is an extensive list, you may attach that list in the next question and indicate such here.
The CoC data and Mortality data will be linked to the cases to determine recurrence. These datasets are linked to the California Cancer Registry data as part of routine procedures. We will obtain permission to access the mortality data from VSAC. The variables include information on mortality due to colorectal cancer and date of death. The CoC data includes dates of subsequent procedures received by the patient related to recurrence of their early stage CRC.

Attach a copy of the document detailing all data sets and each of the variables to be linked. If you provided this information in the answer to the above question, skip this question.
No answer provided.

Will a third party be used for data linkage?
No

DESTRUCTION OF PID VERIFICATION

Indicate that you will provide CPHS with a letter certifying that PID has been destroyed and/or returned to the data source once research is concluded.

Yes

DATA SECURITY LETTER

Upload a certification/statement from the Chief Information Officer, Privacy Officer, Security Officer or equivalent position of the researcher's institution that CPHS Data Security Standards are met.

- *Data security letters cannot be signed by the Principal Investigator or Responsible Official.*
- *The data security letter must be on your institution's letterhead.*
- *Example of data security letter*

Ann Hamilton - Survivorship for early onset colorectal cancer (002).pdf Data Security Letter

Physical Safeguards

DATA PROTECTION

Indicate that research records and physical samples will be protected through the use of locked cabinets and locked rooms; PID in paper form will not be left unattended unless locked in a file cabinet, file room, desk, or office.

Yes

DATA DESTRUCTION

Will data/samples will be destroyed or returned as soon as it is no longer needed for the research project.

Yes

RETAINED DATA

Will the retained data/samples have personal identifiers or be de-identified?

data will contain personal identifiers

DESTRUCTION METHODS

Describe how you will ensure the PID in paper form is disposed of through confidential means, such as cross cut shredding or pulverizing.

Cross cut shredding

FAXING

Describe how you will ensure that faxes with PID are not left unattended and fax machines are in secure areas.

FAX machines are in secure areas. We will use sfax, an electronic method of faxing requests to providers, thus paper copies will not be required. Any faxes with PID will not be left unattended. Computers are password protected

MAILING

Indicate whether mailings of PID are sealed and secured from inappropriate viewing; and whether mailings of 500 or more individually identifiable records of PID in a single package, and all mailings of PID to vendors/contractors/co-researchers, are sent using a tracked mailing method, which includes verification of delivery and receipt, such as UPS, U.S. Express Mail, or Federal Express, or by bonded courier.

Any mailing of PID to request medical records would be sealed and protected, marked as confidential, and sent with a tracking number. There would be no mailings of 500 or more of individually identifiable records of PID.

ELECTRONIC STORAGE

State whether PID in paper or electronic form, e.g., stored on laptop computers and portable electronic storage media (e.g., USB drives and CDs), will ever be left unattended in cars or other unsecured locations.

Any PID on paper or electronic form stored on laptop computers or portable electronic storage media will never be left unattended to cars or other unsecured locations.

PHYSICAL STORAGE

Describe whether facilities, which store PID in paper or electronic form, have controlled access procedures, and 24 hour guard or monitored alarm service.

All facilities which store PID in paper or electronic form at USC are protected by controlled access procedures and have necessary protection as required.

SERVER SECURITY

Provide a description of whether all servers containing unencrypted PID are housed in a secure room with controlled access procedures.

All servers at USC are protected by controlled access procedures and have necessary protection as required.

STORING IDENTIFIERS

Indicate whether identifiers will be stored separately from analysis data.

Identifiers will be stored separately from analysis data. With regard to retaining data with personal identifiers, in Los Angeles, a file that links personal identifiers to the study id will be maintained in order to link these cases to mortality data to be obtained later. These identifiers would include name, date of birth, and registry Patient ID and Study ID. This cross walk file would be maintained at USC for up to 10 years to allow for longer term follow-up. However, in the research database that Dr. Wallner (U of Mich) will have access to for analysis, no personal identifiers will be included.

DISK STORAGE

State whether all disks with PID will be destroyed.

All disks with PID will be destroyed.

Electronic Safeguard

COMPUTER ACCESS OVERVIEW

State whether all computer access will be protected through the use of encryption, passwords, and other protections.

All computer access is protected through use of encryption, passwords and other protections.

FIPS 140-2 COMPLIANCE: WORKSTATIONS

Indicate whether all workstations that contain PID have full disc encryption that uses FIPS 140-2 compliant software. If not, explain why not and what encryption will be used.

Yes all workstations have full disc encryption that uses FIPS 140-2 compliant software.

FIPS 140-2 COMPLIANCE: LAPTOPS

Indicate if all laptops that contain PID have full disc encryption that uses FIPS 140-2 compliant software. If not, explain why not and what encryption will be used.

Yes all laptops have full disc encryption that uses FIPS 140-2 compliant software.

FIPS 140-2 COMPLIANCE: REMOVABLE MEDIA DEVICES

Indicate if PID on removable media devices (e.g. USB thumb drives, CD/DVD, smartphones, backup recordings) are encrypted with software that is FIPS 140-2 compliant.

Yes all removable media devices have full disc encryption that uses FIPS 140-2 compliant software.

SECURITY PATCHES

Indicate if all workstations, laptops and other systems that process and/or store PID have security patches applied in a reasonable time frame.

Yes, all workstations and laptops are updated daily with security software.

PASSWORD CONTROLS

Indicate if sufficiently strong password controls are in place to protect PID stored on workstations, laptops, servers, and removable media.

Yes sufficiently strong passwords are in place and are required to be changed on regular basis.

ELECTRONIC SECURITY CONTROLS

Indicate if sufficient system security controls are in place for automatic screen timeout, automated audit trails, intrusion detection, anti-virus, and periodic system security/log reviews.

Yes, these security controls are in place.

FIPS 140-2 COMPLIANCE: ELECTRONIC TRANSMISSION

Explain whether all transmissions of electronic PID outside the secure internal network (e.g., emails, website access, and file transfer) are encrypted using software which is compliant with FIPS 140-2.

No, PID will be transmitted outside the secure internal network.

INTERNET ACCESSIBILITY

Note if PID in an electronic form will be accessible to the internet.

No, PID in electronic form will not be accessible to the internet

DISPOSING OF PID

When disposing of electronic PID, indicate whether sufficiently secure wiping, degaussing, or physical destruction will be used.

Yes, physical destruction or sufficiently secure wiping will be used.

Conflict of Interest Information

CONFLICT OF INTEREST (COI) INSTRUCTIONS

A COI is defined as any financial or other relationships of the researcher(s) or the institution that could be perceived as affecting the objective conduct of the research, including the interpretation and publication of the findings. Researchers must disclose any COI, including perceived COI.

Financial relationships to be disclosed include but are not limited to the following:

- **Present or anticipated ownership of stock, stock options, or other financial obligations of the source of funding.**
- **Receipt or expectation of payment of any sort in connection with papers, symposia, consulting, editing, etc. from the source of funding.**
- **The sale or licensing or anticipated sale or licensing of medical or other products or intellectual property, such as patents, copyrights, or trade secrets to the source of funding or other entities.**
- **Any past, present or anticipated receipt of money or other valuable consideration from the source of research funding by the researcher(s), the family of the researcher(s), the research institution, or by an institution in which the researcher(s) or the family of the researcher(s) has an interest as owner, creditor, or officer.**

DISCLOSURES

Does any member of the study team, members' spouses, or members' dependent children have any significant financial interests related to the work to be conducted as part of the above-referenced project?

No

Informed Consent Procedures

INFORMED CONSENT PROCEDURES

Provide a description of procedures to be used in obtaining and documenting informed consent from participants.

See instructions and examples on CPHS website.

No informed consent procedures are required for Aim 1.

For Aim 2 we have included a research information sheet that includes the elements of an informed consent. The participant is told that by completing and sending back the survey they are consenting to participate. They will be receiving the materials in their own home and can make the decision if they wish to participate at any time they choose. They are provided with PI and study coordinator phone numbers to call if they have questions. We will be providing a Spanish translation of the research information sheet and the translator certificate in another amendment. (June 4- an edited information sheet has been uploaded in which instructions pertaining to writing skip next to questions they didn't want to answer have been removed)

CONSENT FORMS

Attach copies of consent forms and any other documents or oral scripts used to inform potential research subjects about the study. See examples of consent and assent forms on the CPHS website.

Be sure to include a concise explanation of key information for participants at the beginning of your consent form, as shown in the examples on the website. Also attach the Participant's Bill of Rights (download the revised version from the same CPHS website). CPHS may approve the use of a consent procedure which does not include, or which alters, some or all of the elements of informed consent. If a waiver or alteration of informed consent is being requested, attach a document that explains how all of the criteria below will be satisfied.

HIPAA Determination

HIPAA INSTRUCTIONS

To determine if this project is covered by HIPAA, answer the following questions.

COVERED ENTITY

Will health information be obtained from a covered entity, known as a clearinghouse, such as Blue Cross, that processes or facilitates processing health data from another entity, including but not limited to state databases?

No

HEALTHCARE PROVISIONS

Will the study involve the provision of healthcare by a covered entity, such as the UCD Medical Center?

No

OTHER HIPAA CRITERIA

Will the study involve other HIPAA criteria not listed above?

No

Amendment Changes

List the pages and questions that have been changed.

For March 2025 amendment: On page 4 under Study procedures, the Care Supporter Survey was uploaded. On page 5, Population Description, Rationale, and Study Duration have some information added. Also on page 5, under Recruitment Details, the Info Sheet and the series of letters were uploaded and information was added. The letters are the initial and reminder letters to the participant who had already completed the original survey AND to the person they identified as their Care Supporter for the study participant to hand to their care supporter or for study staff to mail if requested. Also added are an Invitation letter to do an Interview which will be conducted by University of Michigan staff and a print out of the Online form for signing up to do the interview. On page 11 under Consent Forms, the Info sheet for the Care Supporter Survey was uploaded again since it contains the elements of consent.

For 2/6/25 amendment on Page 2 we added Dr. Wallner as a Co-PI and Dr. Bluthenthal as the RO and removed Dr. Hu as the RO. On page 5, database details, we indicated that Dr. Wallner would be involved in the analyses of the mortality data.

For the 9/10/24 Amendment regarding uploading newest letters and Info sheets with ONE sentence added:
On Page 4 under "Study Procedures" a general explanation was added to say we plan to recontact some survey completers in the future with a survey for their designated caregiver.
On Page 5 under "Recruitment details" these 6 things were added: English letter, English reminder letter, English Information Sheet; Spanish letter, Spanish reminder letter, Spanish Information Sheet.
On Page 11 under "Consent Forms" this was uploaded: English Information Sheet. (Info Sheets were uploaded in 2 places - both Recruitment details and Consent forms/Translated documents).
On Page 11 under "Translated Documents" this was uploaded: Spanish Information Sheet.

_____
For the 8/14/24 Amendment regarding adding our Spanish materials:
On Page 5 under "Recruitment details" these 6 materials were added: Spanish language CCR brochure; Spanish Info Sheet; Spanish recruitment letter; Spanish reminder letter; Spanish reminder email wording; and Spanish survey.
On Page 11 under "Translated documents" these 3 items were added: Spanish Info Sheet, Spanish script for follow-up, and Spanish script for collecting missing information. [Therefore the Spanish Info sheet has been placed in 2 categories: Recruitment details and Translated documents.]
Also on P 11 under "Translator" 3 certificates from the translation service were added.

Cover Letter and PI Signature for PI Submission

BUDGET

Does this project have a budget?

Yes

Attach a copy of your project budget here

PI Signature for Coordination Submission (Amend)
- Submitted 03/13/2025 10:31 PM ET by Ann Hamilton, PhD

PI Review

Please click "Next" and "Submit" in order to submit this application, regardless of whether or not it is ready for review. If you indicated it is ready for review, the amendment will be submitted to the CPHS Office, and if not, it will be returned to the individual who completed the form for changes.

Is this application ready to be reviewed by the IRB? If not, choose no to have the application sent back to the coordinator for revisions.

Yes

To sign this form, enter your IRBManager password. By signing this form, you are indicating that the information within this application is accurate and reflects the proposed research and that you attest to the conflict of interest disclosures for all study team members.

Signed Thursday, March 13, 2025 10:30:51 PM ET by Ann Hamilton, PhD

Notify IRB for Pre-Screening
- Submitted 03/25/2025 5:07 PM ET by Sussan Atifeh

Internal IRB Screening

The questions on this page will be blank when an amended copy is submitted. If the form is returned during the amendment review, the questions on this page will appear as answered previously during the amendment review (responses from the initial review will not appear)

Is this study ready to be reviewed by the CPHS panel?

Yes

Choose the IRB committee to review this study (this defaults to CPHS)

CPHS

Level of Review Determination (once the level of review is assigned for this project, do not change this answer unless the reviewer/committee has decided that the study requires a different level of review)

Full Board Minimal Risk

Please provide a rationale for your level of review preliminary determination
We are now uploading our Care Supporter Survey segment of the study. We will mail an invitation to the patient participant (who had previously completed the main survey) explaining the care supporter portion of the study and asking them to pass on the survey to their care supporter. We believe most care supporters will be either in the same household as the study participant or live nearby. Alternatively, some study participants may want to send us their care supporter's contact information, and we will mail a survey directly to the care supporter. Eligible care support persons will be given or sent a packet of materials, consisting of: 1) a letter plus an Info Sheet indicating that they have been selected to participate in a study and describing the purpose of the study, and includes contact information for them to use if they have any questions; 2) a paper copy of the survey and instructions for completion; and 3) a postage-paid envelope for returning the paper survey.

We will then use a modified version of the Dillman method to enhance survey response rates and will follow up with reminder letters to encourage survey completion and telephone calls to answer questions. We will limit the number of follow up calls to n=5. We will provide a telephone interview option as needed to ensure optimal retention rates even in populations with low literacy. We will also have an online survey option. Care Supporter Survey materials will be provided in both English and Spanish for patients who had previously completed the original SURVIVE Study survey in Spanish. A $20 gift card will be provided after a survey is returned as a thank you for their participation.

As part of the Care Supporter survey, there is a question (QF11) asking if they would be interested in a follow up interview to share experiences. We will send out an invitation letter to the Study participant if their care supporter indicated interest in this interview. Respondents who agree to the interview are requested (per instructions on the invitation letter) to communicate with a staff member at the University of Michigan who will be the person conducting the interview.

At this time, we are including English language materials only. A subsequent amendment will be submitted with Spanish language translations.
